Disable AppArmor

AppAmor can be disabled on your cluster with command-line flag

```
--feature-gates=AppArmor=false
```

Note: When disabled, any Pod that includes an AppArmor profile will fail validation with a "Forbidden" error. Note that by default docker always enables the "docker-default" profile on non-privileged pods (if the AppArmor kernel module is enabled), and will continue to do so even if the feature-gate is disabled. The option to disable AppArmor will be removed when AppArmor graduates to general availability (GA).
